

**Amendments to the Claims**

The following Listing of Claims replaces all prior versions, and listings, of claims in the application.

Listing of Claims:

Sub  
B1  
A1  
Ont

Claim 1 (original): A process for a camera having a display, the process comprising the steps of:  
displaying a cursor and a plurality of icons on the display; moving the camera;  
sensing motion of the camera;  
based on the motion, repositioning the icons in the display until the cursor is on a target icon of the plurality of icons; and  
selecting the target icon.

Claim 2 (original): The process as set forth in claim 1, wherein at least one of the icons is repositioned to appear to be fixed in space with regard to an image being viewed in the display.

Claim 3 (original): The process as set forth in claim 2, wherein the at least one of the icons is repositioned in a direction opposite, and of corresponding magnitude, to the motion of the camera.

Claim 4 (original): The process as set forth in claim 1, wherein the display is a viewfinder.

Claim 5 (original): The process as set forth in claim 1, wherein the motion is sensed using a non-optical motion detector.

Claim 6 (original): The process as set forth in claim 1, wherein the motion is sensed using an optical motion detector.

Claim 7 (original): The process as set forth in claim 1, wherein the target icon is a thumbnail image.

Claim 8 (original): The process as set forth in claim 7, including the step of performing image manipulation on a high resolution image associated with the thumbnail image.

Claim 9 (original): The process as set forth in claim 8, including the step of transferring the manipulated high resolution image to a device external to the camera.

Claim 10 (original): The process as set forth in claim 1, wherein the target icon is associated with a function to be performed when the target icon is selected.

AI  
CMU  
Claim 11 (withdrawn): A process for a camera having a display, the process comprising the steps of:

- displaying a cursor and a first portion of a scene on the display;
- using the cursor to select a first location within the first portion;
- moving the camera to display a second portion of a scene on the display; sensing motion of the camera;
- displaying the cursor based on the motion; and
- using the cursor to select a second location within the second portion such that the first and second locations define a region of the scene, the region being of greater extent than is displayed in the display.

Claim 12 (withdrawn): The process as set forth in claim 11, wherein an operation is performed on the region.

Claim 13 (withdrawn): The process as set forth in claim 12, wherein the operation includes the step of capturing a panoramic image having the extent of the region.

Claim 14 (withdrawn): The process as set forth in claim 13, wherein the step of capturing the panoramic image includes displaying an indicator on the display to guide movement of the camera.

Claim 15 (withdrawn): The process as set forth in claim 12, wherein the operation includes the step of zooming the camera to display the region in the display.

Claim 16 (withdrawn): A process for a camera having a display, the process comprising the steps of:

displaying a first portion of an image on the display; moving the camera;  
sensing motion of the camera; and  
based on the motion, displaying a second portion of the image on the display.

Claim 17 (withdrawn): The process as set forth in claim 16, wherein the image is a panoramic image.

Claim 18 (withdrawn): The process as set forth in claim 16, wherein the image has a resolution greater than the display.

Claim 19 (withdrawn): A camera having a display, the camera comprising:  
a motion sensor to sense motion of the camera;  
circuitry to display a cursor and a plurality of icons on the display, based on the motion, the circuitry repositioning the icons in the display until the cursor is on a target icon of the plurality of icons; and  
a selector to select the target icon.

Claim 20 (withdrawn): A camera having a display, the camera comprising: a motion sensor to sense motion of the camera; a selector; and

circuitry to displaying a cursor and a first portion of a scene on the display, if the cursor and selector is used to select a first location within the first portion, and the camera is moved to display a second portion of a scene on the display, the circuitry displays the cursor based on the motion so that the cursor can be used to select a second location within the

second portion such that the first and second locations define a region of the scene, the region being of greater extent than is displayed in the display.

Claim 21 (withdrawn): A camera having a display, the camera comprising:  
a motion sensor to sense motion of the camera; and  
circuitry to displaying a first portion of an image on the display, and if motion of the camera is sensed, based on the motion, the circuitry displaying a second portion of the image on the display.

AI Cont  
Claim 22 (new): A process for a camera having a display, comprising:  
sensing motion of the camera;  
interpreting sensed motion of the camera as a user interface input; and  
presenting images on the display in accordance with the interpreted user interface input.

Claim 23 (new): The process of claim 22, wherein the interpreting step comprises determining a viewpoint for displaying a region of a given image on the display based on the sensed motion of the camera.

Claim 24 (new): The process of claim 23, wherein the given image comprises a collection of icons.

Claim 25 (new): The process of claim 24, wherein the presenting step comprises presenting in the display different regions of the given image containing respective subsets of the collection of icons in accordance with the determined viewpoint.

Claim 26 (new): The process of claim 25, wherein the presenting step comprises superimposing a cursor in front of the displayed region of the give image, and further comprising selecting an icon displayed behind the cursor in response to a user selection input.

Claim 27 (new): The process of claim 24, wherein the collection of icons includes thumbnail images each corresponding to a lower-resolution version of a respective stored image.

Claim 28 (new): The process of claim 22, wherein the sensing step comprises tracking motion of the camera.

Claim 29 (new): The process of claim 28, wherein the interpreting step comprises determining a sequence of regions of the given image to present on the display reflecting the tracked motion of the camera, and the presenting step comprises presenting the sequence of regions.

Claim 30 (new): The process of claim 22, wherein the sensing step comprises acquiring a sequence of images and comparing successive images in the sequence to identify parameters describing motion of the device.

Claim 31 (new): A camera, comprising:  
a display;  
a motion sensor configured to sense motion of the camera; and  
circuitry configured to interpret sensed motion of the device as a user interface input  
and to present images on the display in accordance with the interpreted user interface input.
